

POLYCORP 021052

Chloroprene Tack Cement

March 2015

Polycorp 021052 Black chloroprene tack cement used for bonding chloroprene rubber and other synthetic rubber lining to metal in lining operations. It provides good green tack and is suitable for use with autoclave, open steam.

TYPICAL PROPERTIES:**021052**

Composition	A mixture of polymers, organic compounds and fillers dissolved in an organic solvent system.
Color	Black
Solids content	25.0 ± 2.0 %
Viscosity (Brookfield RVT) Spindle # 4, 20 rpm, 25°C	250 ± 50 cP
Theoretical Coverage	200 sq. ft/ gal
Shelf Life	6 months from date of shipment, unopened container 70°F- 80°F (21°C - 27°C) storage temperature

Mixing:

Thoroughly stir adhesive before use. During application stir occasionally to keep solids uniformly dispersed.

Application:

Polycorp 021052 cement can be applied by brush or roller. Cement should be dry to the touch before rubber lay-up. When not in use, cover containers to prevent solvent loss. Please refer to section 6 of Application manual for general application instructions.

Safety:

Before using this product please refer to the Material Safety Data Sheet (MSDS) for safe use and handling.
