

Rubber Linings for Corrosion and Abrasion Protection

Polycorp designs and manufactures the highest quality Protective Linings made from uncured natural and synthetic rubber. We help customers manage the risk associated with corrosive and abrasive materials, extending asset life and protecting against accidental release.

Polycorp linings are used to protect railcar and truck tanks, holding vessels, process equipment, and pipes, from a wide range of acids, alkalis and abrasives. Our customers benefit from Polycorp's extensive product catalogue and decades of proven performance in the protective linings industry.

Contact us for answers to your corrosion and wear problems and take advantage of our core strengths of **Innovation, Quality, Technical Support**, and most importantly **Solutions**.

Polymeric Our premium range of linings designed to meet the most exacting standards for quality and consistency. The material of choice for railcar, truck, and tank linings where surface finish and cosmetics are critical.

T-Series Our cost effective alternative for applications where cosmetic requirements are less stringent. Often used in mining, pipe, and equipment applications where abrasion resistance is most important.

Innovation

Polycorp continually introduces new products to meet customer needs. Our in-house Technical Department can design a formula specifically for your project if a suitable material is not in our extensive catalogue. **Polycorp is the industry leader with over 100 years of heritage to prove it.**

Quality

Polycorp quality begins with our **ISO 9001:2008** Certification and ends only when customers are satisfied with the materials and service. Polycorp has the latest testing equipment to ensure our products exceed your needs and satisfy your requirements. Polycorp is the only North American lining manufacturer to strain natural rubber compounds to remove contaminants.

High Quality = Reduced Risk

Technical Support

Polycorp has decades of experience in engineered polymer products. This experience is your advantage. Our sales and technical personnel are always available to design and engineer a material and installation program suited to your needs. Polycorp offers on-site support and we are an **extension of your team on those difficult jobs.**

Solutions

Polycorp will provide you with the information you need when you need it and recommend rubber compounds that work best for your application. Polycorp offers **over 100 different linings** to protect customer assets against corrosive and abrasive conditions. Polycorp has the people, facilities, formulas, equipment and testing to produce the materials you require. All backed by the support you want, wherever you are. You can count on Polycorp – **there for you over the long term.**
